Figure 11

FIG. 12 is a block diagram of a system 1200. The system 1200 includes a processor 1202, a memory 1204, and a storage device 1206. The processor 1202 is connected to the memory 1204 and the storage device 1206. The memory 1204 is connected to the storage device 1206. The processor 1202 is also connected to a network 1208. The network 1208 is connected to the memory 1204 and the storage device 1206. The network 1208 is also connected to a user interface 1210. The user interface 1210 is connected to the memory 1204 and the storage device 1206. The user interface 1210 is also connected to the processor 1202.

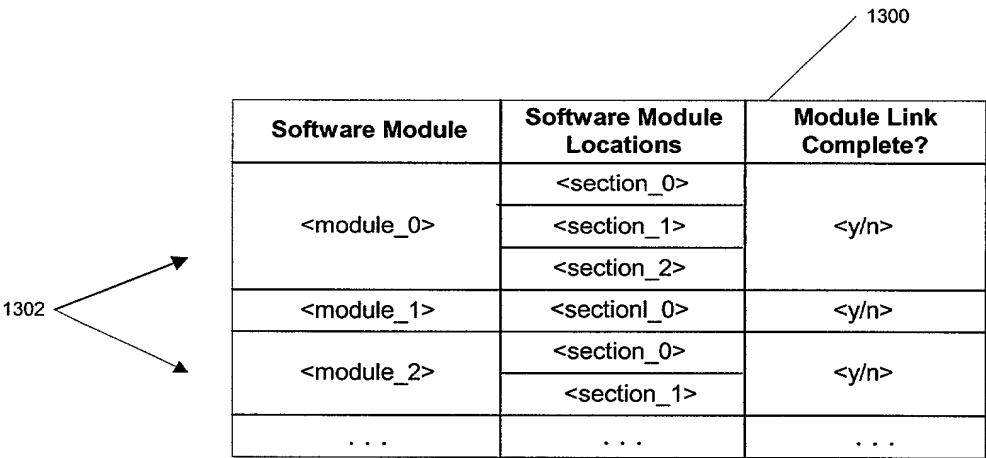

Figure 13

FIG. 14 is a schematic diagram of a table 1400 illustrating a mapping between software modules and symbols. The table 1400 is organized into four columns: Software Module, Symbol, Reference Locations, and Reference Base Addresses. The table contains multiple rows, with the first three rows explicitly labeled. The first row shows a mapping for <module\_0> to <symbol\_0>, which points to <address\_0>, <address\_1>, and <address\_2> in the Reference Locations column, and <base\_addr\_0>, <base\_addr\_1>, and <base\_addr\_2> in the Reference Base Addresses column. The second row shows a mapping for <module\_1> to <symbol\_2>, which points to <address\_0> in the Reference Locations column, and <base\_addr\_0> in the Reference Base Addresses column. The third row shows a mapping for <module\_2> to <symbol\_3>, which points to <address\_0> and <address\_1> in the Reference Locations column, and <base\_addr\_0> and <base\_addr\_1> in the Reference Base Addresses column. The table concludes with an ellipsis row. A reference numeral 1402 points to the first two columns, and 1400 points to the entire table structure.
